

Karaoke Tab Guide

Use the Karaoke tab for backing tracks, lyrics, vocal monitoring, optional video preview, and vocal recording.

Control	Purpose
Add Tracks	Build the backing-track queue.
Lyrics editor	Load, edit, time, or detect lyrics.
Key / Tempo	Adjust track pitch and speed.
Live monitor	Route processed vocals to an output.
Karaoke REC	Record vocal takes for the current track.

Track workflow

- Add backing tracks from the browser or load selected tracks into the queue.
- Use Play, Pause, Stop, and the seek bar to rehearse or record against the current track.
- Key and tempo sliders let you adjust the backing track for the singer.

Lyrics

- Load lyrics manually, paste or edit lyrics in the editor, or use detection tools when available.
- Timed lyrics highlight the active words during playback.
- The cache is scoped to the backing track so edits stay with the song.

Vocal monitor and recording

- The live vocal monitor sends processed vocal audio to the selected output device.
- The recorder captures karaoke vocal takes into the karaoke recording folder.
- Saved vocal files can be played, exported, opened, or deleted from the right rail.

Video preview

- Record Video enables camera preview for karaoke sessions when video capture is needed.
- The preview shares the selected camera system with the Podcast tab so camera profiles remain consistent.

Tip: keep this guide near the matching tab. The Help menu opens one focused PDF per tab so the live workflow stays easy to scan.
